

FortiMail™

Comprehensive Messaging Security

Proven Security

The FortiMail family of appliances is a proven, powerful messaging security platform for any size organization, from small businesses to carriers, service providers, and large enterprises. Purpose-built for the most demanding messaging systems, the FortiMail appliances utilize Fortinet's years of experience in protecting networks against spam, malware, and other message-borne threats.

Intelligent Protection

You can prevent your messaging systems from becoming threat delivery systems with FortiMail. Its inbound filtering engine blocks spam and malware before it can clog your network and affect users. Its outbound inspection technology prevents outbound spam or malware from causing other antispam gateways to blacklist your users (including mobile traffic). The FortiMail dynamic and static user blocking gives you granular control over all of your policies and users.

FortiMail provides Identity-Based Encryption (IBE), in addition to S/MIME and TLS, as email encryption option to enforce policy-based encryption for secure content delivery. Further, the FortiMail customizable and predefined dictionaries prevent accidental or intentional loss of confidential and regulated data.

High Performance and Unmatched Flexibility

The FortiMail systems provide high-performance mail routing and security by utilizing multiple high accuracy antispam filters. Coupled with FortiGuard™ Labs' industry leading real-time antivirus and antispymware protection, FortiMail provides you with extremely fast and accurate messaging security that will not affect your users or delay their communications. FortiMail also gives you unmatched flexibility to deploy your messaging security in the mode that best suits your environment and your users.

DATASHEET

FortiMail Product Family: Comprehensive Messaging Security

- ✓ Inspect up to 1.3 million emails per hour
- ✓ Unmatched deployment flexibility
- ✓ Identity-Based Encryption delivered in both push and pull methods
- ✓ Customizable and predefined dictionaries prevent data loss
- ✓ Granular policy enforcement with endpoint
- ✓ Periodic updates from FortiGuard

Features	Benefits
Unmatched deployment flexibility – Transparent, Gateway, and Server mode	All mail servers on the market deploy in Server mode; some offer Gateway mode. Fortinet is the only one to offer Transparent mode, which enables a FortiMail to intercept emails without the need to change the DNS MX record or change the existing mail server network configuration.
Identity-Based Encryption delivered in the option the method of push and pull	Ensures secure delivery of confidential or regulated content. Extremely easy to deploy – no additional hardware or software to install, no user provisioning, no pre-enrollment for recipient.
Data Loss Prevention	Detect the accidental or intentional loss of confidential or regulated data. You can choose to block messages containing data matching a range of patterns or create policies to enforce the encryption of messages carrying this data. Aids in PCI/DSS, HIPAA compliance.
Antispam gateway that retrieves endpoint information	Enables Carriers and Service Providers to block spamming endpoints (including smart phones) preventing blacklisting of legitimate subscribers.
Integrated security with no per-user or per-mailbox pricing	Complete multi-layered antivirus, antispam, antispymware, and antiphishing security protection for an unlimited number of users. Greatly reduces TCO.

TRANSPARENT, GATEWAY AND SERVER MODE FEATURES

- Multiple Email Domain Support
- High Availability (HA) Support
- SMTP Mail Gateway for Existing Email Servers
- Integrated Policy-Based Email Routing and Queue Management
- Outbound Mail Relay for Improved Mail Security
- Granular Layered Detection Policies for Spam and Viruses Addresses, IP Addresses, or Domains
- Per User Antivirus and Antispam Scanning Using LDAP Attributes on a Per Policy (Domain) Basis
- LDAP-Based Email Routing
- Quarantined Message Access with WebMail and POP3
- Daily Quarantine Summaries
- Policy-Based Archiving of Inbound and Outbound Messages with Backup Support for Remote Storage
- Mail Queue Support for Failed, Deferred, and Undeliverable Email
- SMTP Authentication Support Through LDAP, RADIUS, POP3 or IMAP
- Per User Automatic White List
- SNMP Support Using Standard and Private MIB with Threshold Based Traps
- Maintains Local Sender Reputation List Based on:
 - Number of Viruses Sent
 - Amount of Spam Sent
 - Number of Bad Recipients
- Dynamic DNS (DDNS)
- Greylist Database Persistence
- Security Hardened Operating System
- Multiple Language Support
- Regex Pattern Matching
- Sender Policy Framework (SPF)
- DomainKeys
- DomainKeys Identified Mail (DKIM)
- Fragmented Message Blocking
- Virtual Host Support Using Pool of IP Address for Source and/or Destination

DENIAL-OF-SERVICE PROTECTION

- Denial of Service (Mail Bombing)
- Recipient Address Attack
- Email Rate Limiting
- Reverse DNS Check (Anti-Spoofing)
- Forged Sender Address

ENCRYPTION

- Identity-based Encryption for Push/Pull Delivery of Encrypted Messages
- S/MIME Support for Gateway-to-Gateway Encryption
- Support for strong-crypto protocols including HTTPS, SMTPS, SSH, IMAPS and POP3S

HIGH AVAILABILITY (HA)

- Supported in all Modes
- Active-Passive Configuration
- Quarantine and Mail Queue Synchronization
- Stateful Failover
- Device Failure Detection and Notification
- Link Status Monitor
- Link Failover

MANAGEMENT, LOGGING, AND REPORTING

- QuickStart Setup Wizard
- Basic / Advanced Management Modes
- Real-time Statistics
- Tiered Administration Accounts
- Quarantine Search Capability
- Automated PDF report scheduling
- Configuration Change and Management Event Logging
- Antivirus Incident Logging
- Antispam Activity Logging
- External or Local Syslog Server Support
- External or Local Storage Server Support, Including iSCSI devices
- Expanded Central Reporting with FortiAnalyzer Support
- Critical Events and Virus Incident Alerting
- Comprehensive Reporting with Over 140 Reports In Seven Categories
- Scheduled Report Generation
- Dictionary-triggered Archiving

ANTISPAM - CONTENT LEVEL DETECTION

- Inbound and Outbound Filtering
- Extensive Heuristic Spam Filters
- Dynamic Heuristic Rule Updates
- Attachment/Content Filtering
- Deep Email Header Inspection
- Bayesian Statistic Filtering
- Spam URI Real-Time Blocklists (SURBL)
- Banned Word Filtering
- Inbound and Outbound Filtering
- Spam Quarantining and Spam Tagging
- Spam Management (Accept, Relay, Reject or Discard) Based on Email SHASH Spam Checksum Block List
- Spam Image Analysis Scanning
- PDF Scanning / PDF Image Scanning
- FortiGuard Antispam Service
- Global and User Customized Black/White Lists
- 3rd Party Real-Time Black Listed (RBL) Support
- Forged IP Checking
- Greylist Checking

ANTIVIRUS / ANTISPYWARE PROTECTION

- Virus Scan SMTP Messages
- Compressed Attachment and Nested Archive Support
- Quarantine Infected Files
- Replacement Message Notification
- Block by File Type
- Attachment Filtering

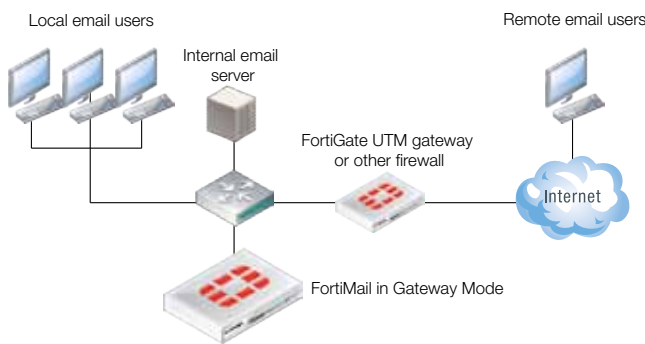

SERVER MODE SPECIFIC FEATURES

- POP3, SMTP, and IMAP Email Services
- SMTP over SSL Support
- Disk Quota Policy Support for User Accounts
- Secure WebMail Client Access
- User, Group and Alias List Support
- Local Account and LDAP Authentication
- Bulk Folder Support for Spam Mail
- WebMail Calendar
- Email Forwarding Preference
- Address Book Synchronize with LDAP

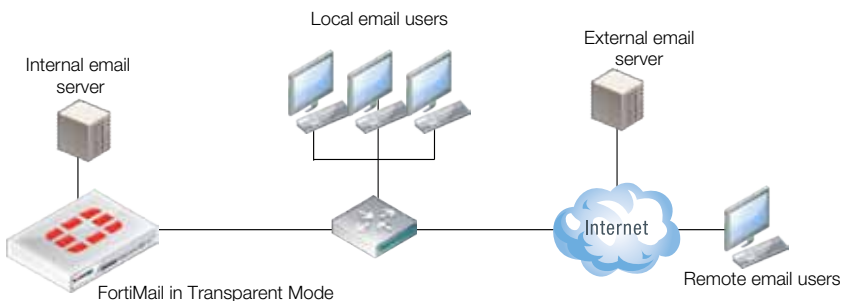

FortiMail Deployment Options

You have the option of deploying FortiMail in Transparent, Gateway, or Server mode, to meet your specific messaging security requirements and minimize infrastructure changes or service disruptions:

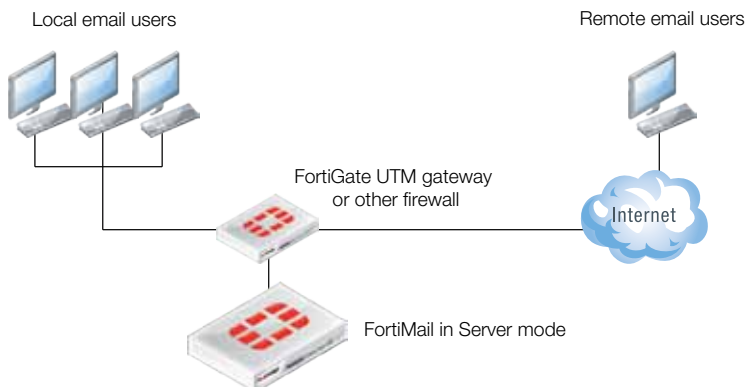

- Gateway Mode:** Provides inbound and outbound proxy mail transfer agent (MTA) services for existing email gateways. A simple DNS MX record change redirects email to FortiMail for antispam and antivirus scanning. The FortiMail unit receives messages, scans for viruses and spam, then relays email to its destination email server for delivery.

- Transparent Mode:** Each network interface includes a proxy that receives and relays email. Each proxy can intercept SMTP sessions even though the destination IP is not the FortiMail appliance. FortiMail scans for viruses and spam, and then transmits email to destination email server for delivery. Eliminates the need to change the DNS MX record or change the existing mail server network configuration.

- Server Mode:** The FortiMail unit acts as a stand-alone messaging server and delivers full-featured SMTP mail server functionality, with flexible support for secure POP3, IMAP and WebMail access. It receives messages, scans for viruses and spam, and then delivers to its email users' mailboxes. External MTAs connect to the FortiMail server, as in server mode, the FortiMail unit functions as a protected server itself.

Identity Based Encryption

Deliver confidential or regulated email securely without requiring additional hardware, software user provisioning, or additional license fees. Eliminate the use of paper-based communications to save costs.

- Policy-Based Encryption:** Create policies to automatically encrypt messages for compliance based on content or recipient
- Push or Pull Mode:** Use Push, Pull, or a combination of modes to meet your requirements
- Easy to Deploy, Use, and Manage:** Implement IBE in any deployment mode, including Transparent. Deploy without any user provisioning or additional hardware or software

Technical Specifications	FortiMail-100C	FortiMail-400B	FortiMail-2000B	FortiMail-3000C	FortiMail-5001A

FortiGuard® Security Subscription Services deliver dynamic, automated updates for Fortinet products. The Fortinet Global Security Research Team creates these updates to ensure up-to-date protection against sophisticated threats. Subscriptions include antivirus, intrusion prevention, web filtering, antispam, vulnerability and compliance management, application control, and database security services.

FortiCare™ Support Services provide global support for all Fortinet products and services. FortiCare support enables your Fortinet products to perform optimally. Support plans start with 8x5 Enhanced Support with “return and replace” hardware replacement or 24x7 Comprehensive Support with advanced replacement. Options include Premium Support, Premium RMA, and Professional Services. All hardware products include a 1-year limited hardware warranty and 90-day limited software warranty.
